M-LINEAR-FLEX-1212 FIXTURE

LINEAR LED LIGHTING SOLUTIONS

The METRO M-LINEAR-FLEX-1212 is a flexible silicone extrusion with forward-facing LEDs mounted along the length of the fixture. This orientation produces a clean, direct-view line of light and allows the fixture to bend over edges—for example, from the top of a headboard around and down the side—while keeping the light aimed forward. It is ideal for designs that require a continuous illuminated line that wraps over a radius or contour while maintaining uniform front-facing illumination. Supplied with matching end caps and mounting clips for easy installation.
